

Directional spool valves, direct operated, with mechanical or manual actuation

Type WMR, WMRZ, WMU, WMM and WMD(A)

RE 22280

Edition: 2013-06

Replaces: 04.10

- ▶ Size 6
- ▶ Component series 5X; 6X
- ▶ Maximum operating pressure 315 [4569 psi]
- ▶ Maximum flow 60 l/min [15.8 US gpm]

Features

- ▶ 4/3, 4/2 or 3/2 directional design
- ▶ Porting pattern according to DIN 24340 form A (**without** locating hole)
- ▶ Porting pattern according to ISO 4401-03-02-0-05 and NFPA T3.5.1 R2-2002 D03 (**with** locating hole)
- ▶ Types of actuation:
 - Roller plunger
 - Hand lever
 - Rotary knob
- ▶ Inductive position switches and proximity sensors (contactless)

- ²⁾ The external parts made of metal are galvanized, treated with an anti-corrosion agent or made of stainless steel. This design is also suitable for on-wall applications.
- ³⁾ Only for valves with 2 spool positions such as versions "WMR", "WMU" and "WMM"; not for version "J"
- ⁴⁾ Use if volume flow > performance limit of the valve, effective in channel P.
- ⁵⁾ Locking pin ISO 8752-3x8-St, material no. **R900005694**, separate order

Notice! Preferred types and standard units are contained in the EPS (standard price list).

Function, section

Type WM.. valves are mechanical, manually actuated directional spool valves. They control the start, stop and direction of a flow.

Directional valves basically consist of housing (1), one type of actuation (2) (roller plunger, hand lever, rotary knob), control spool (3), and one or two return springs (4).

In de-energized state, the return springs (4) maintain the control spool (3) in central or starting position - if the rotary knob is actuated with a detent.

The control spool (3) is moved to the desired spool position by means of the type of actuation (2).

Detent

Directional valves with rotary knob are generally designed with detent. Directional valves with hand lever are optionally available as 2 or 3 position valves with detent. Directional valves with roller plunger are generally designed without detent. If types of actuation with detent are used, each spool position can be locked, depending on the valve type.

Throttle insert

The use of a throttle insert is required when due to prevailing operating conditions, flows can occur during the switching processes, which exceed the performance limit of the valve.

It is inserted in channel P of the directional valve.

**Important information on hydraulic fluids!**

- For more information and data on the use of other hydraulic fluids refer to data sheet 90220 or contact us!
- There may be limitations regarding the technical valve data (temperature, pressure range, life cycle, maintenance intervals, etc.)!
- The flash point of the hydraulic fluid used must be 40 K higher than the maximum solenoid surface temperature.

► Flame-resistant – containing water:

- Maximum pressure difference per control edge 50 bar
- Pressure pre-loading at the tank port > 20% of the pressure differential, otherwise increased cavitation
- Life cycle as compared to operation with mineral oil HL, HLP 50 to 100%

¹⁾ The cleanliness classes specified for the components must be adhered to in hydraulic systems. Effective filtration prevents faults and at the same time increases the life cycle of the components.
For the selection of the filters see www.boschrexroth.com/filter.

Performance limits
(measured with HLP46, $\vartheta_{oil} = 40 \pm 5 \text{ }^{\circ}\text{C}$ [$104 \pm 9 \text{ }^{\circ}\text{F}$])

 Notice!

The specified switching power limits are valid for operation with two directions of flow (e.g. from P to A and simultaneous return flow from B to T).

Due to the flow forces acting within the valves, the permissible switching power limit may be considerably lower with only one direction of flow (e.g. from P to A while port B is blocked)!
In such cases, please consult us!
